VT DOORS MEET ACCEPTABLE GREENGUARD™ INDOOR AIR QUALITY CRITERIA

VT Industries produced two particleboard core doors (Wood Veneer Door Type 5502-2 & HPDL Door Type 404-3) for testing by Air Quality Sciences Inc. in December 2005.

The doors were tested in accordance with the following the environmental chamber guidelines of ASTM D 5116-97 and ASTM D 6670-01, the U.S. Environmental Protection Agency's (USEPA) Environmental Technology Verification (ETV) protocol, and the State of Washington (SOW).

Each door was placed in an environmental chamber and monitored for emissions of total volatile organic compounds (TVOCs), formaldehyde, total aldehydes and other individual volatile organic compounds (iVOCs) over a one-week exposure period.

The test results on the two doors met GREENGUARD Environmental Institute (GEI) emission standards of the SOW, World Health Organization (WHO) and the German Federal Environmental Agency (Blue Angel Programs).
