

Product Update

MAY 31, 2003

#P141F

Revision 02

Applies to Flush doors

THE VT "EDGE"

VT's constant effort to improve overall product quality, customer satisfaction and manufacturing processes has led to a change in the thickness of our matching hardwood edge.

The thickness has changed from 1/4" to 1/16" solid hardwood edge. The 1/16" edge uses less material, expands positive pressure fire door approvals, and is more cost effective.

Our manufacturing process remains the same. VT's matching 1/16" hardwood edge applied after beveled core assembly and before face material allows for proper "ease" on stiles resulting in a seamless wood appearance.

Updated architectural specifications, cutsheets and support literature are now available. Please reference our Order Process Guide via the Web site at www.vtindustries.com/doors.

The 1/4" solid hardwood edge is no longer available effective September 1, 2003.

Please contact your Customer Service Center representative or your area sales representative if you have any questions concerning this change.
